

## Tanks in scattered trees

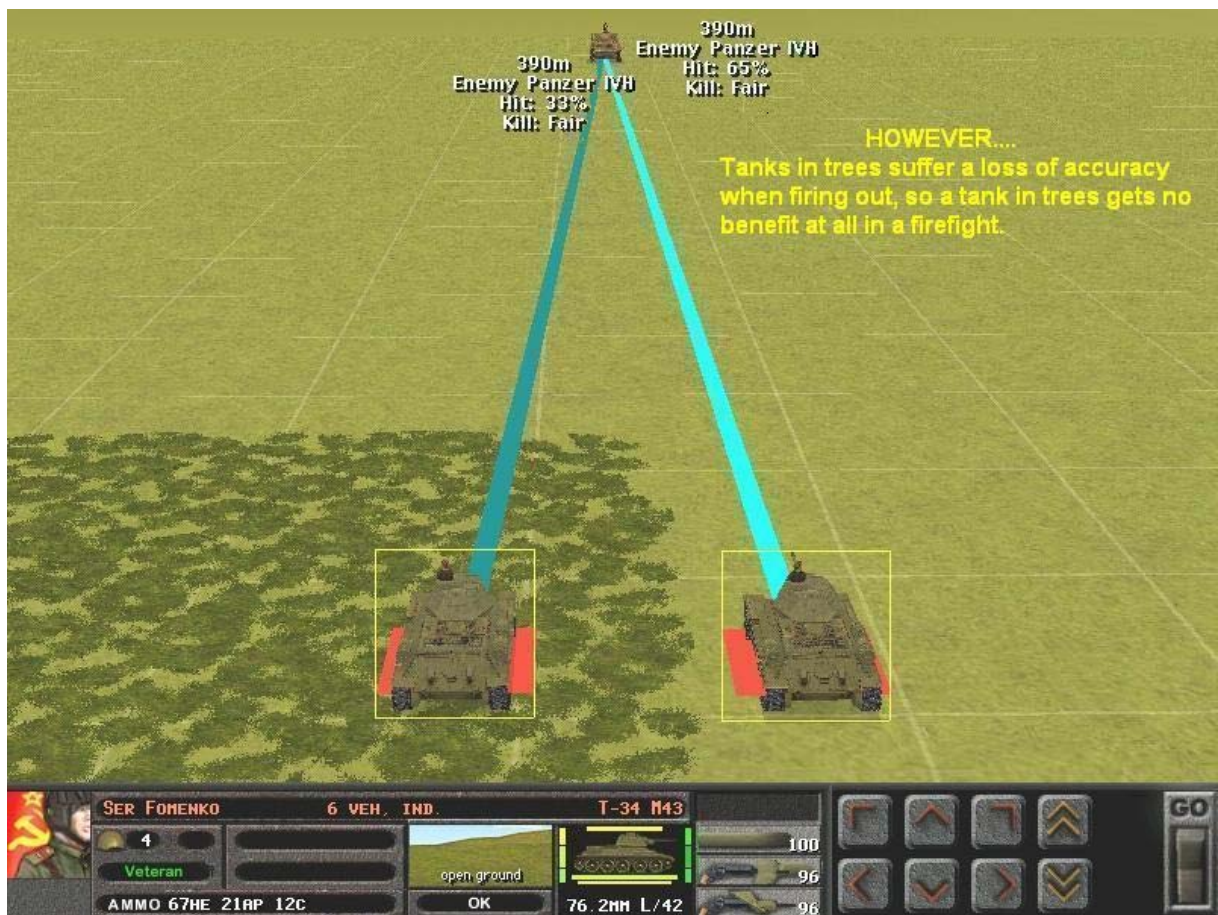

This series of tests in clear midday boils down to the following -  
A tank in scattered trees will be spotted just as easily as if he was in the open.

If shot at, a tank in scatt will be harder to hit if he's a fair way back inside the trees, but if he fires back, his own accuracy will be reduced too, so the benefit cancels out.

If a tank wants to stay unseen he must get deep inside the trees, but he himself then won't be able to see out..

The only way to guarantee you won't be seen is to position your tank at least 54 metres (more in spring / autumn/ winter) inside the trees like this T-34 is doing (inset). Use the 'target' line to get a distance readout.
