

Shove it

Pic shows a test in progress as Russian units try out their muscle at shifting German wrecks..

WHO CAN SHOVE WHAT IN CMBB

I lined up a selection of units, shot them up to turn them into wrecks, then drove a selection of vehicles up and down to see which had the horsepower to push a wreck out of the way. Then I switched nationalities and ran another test.

How to read the chart - A shover can push any enemy wreck below it in the list. Example -the Jagdtig,Kingtig and Panther can push anything in the known universe. But the Russians have nothing that will shift Jagdtig and Kingtig wrecks.

And the Pz II can push anything below the T-34/76. Both sides halftracks are tough, they can even push some light tanks.
